

Sod Care Instructions

Watering:

Water 2 times per day for 10-15 minutes per time for the first 3 weeks after the sod is installed.

Water 1 time per day for 10-15 minutes per day for the following 3 weeks. Water in the a.m. only.

Depending on the time of year you can cut the watering down to 3-5 days per week after 6 weeks of the sod being installed. The frequency will vary depending on time of year and how much water your yard needs.

Winter: Water 1 time per week on weeks in which there is no precipitation. Water in the late afternoon during the warmest part of the day.

Mowing:

The lawn shouldn't be mowed for 2 weeks after installation. There on after mow when the lawn reaches a maximum height of 5". Cut down to a height of 2".

Fertilizing:

No fertilizing is needed for up to 2 months after the sod is installed if the ground has been rototilled and topsoil has been mixed in. After the initial 2 months the lawn should be fertilized 3 times per year in March, July and October.

Extra Items: No power raking or aerating to be done for the first season but the lawn can be aerated 2 times per year (spring and fall) and power raked (de-thatched) in the spring. Power raking and aerating should be done at least once a year after first season.

Warranty: We will warranty the sod for 1 year if all of the instructions above are followed **PLUS** you inform us immediately if you notice anything wrong with the sod, like discoloration, dead spots or browning areas.
